1/9/2023	Web	<p>In your Bay Crossing Study TIER 2 NEPA Preferred Corridor Analysis opening paragraph third sentence mention "support for a replacement bridge in Corridor 7". I again refer you to the Maryland Chesapeake Bay Southern Crossing submitted in July/August 2021 to(the MdTA project and studies section website)to provide two examples of why a bridge is not the only alternative but would also like to know if in fact a decision has been made regarding a bridge vs a tunnel or combination there of? I would also like to update my study and to add to TIER 2 comments the following: Incorporate applications of Cellular vehicle to everything (C-V2X) via either device to network or vehicle to network/VTN and device to device including vehicle to vehicle (V2V) , vehicle to infrastructure (V2I) , and vehicle to pedestrian (V2P). Automated toll collection, E Z Pass recognition/collection, Emergency vehicle prioritization are just a few examples of C-V2X and I am sure applications are being used at Incident Management Scenes and Highway/Maintenance operations particularly during winter operations and summer construction/travel seasons. Any C-V2X application that could be beneficial to expediting processes etc. should be researched to confirm or refute if the said application is worth the time and money invested. Thank You! 01/09/2023 ,</p>
